VIDEO: MIT scientist Gerald Schroeder explains the conclusive scientific discovery of God.

Schroeder examines the current scientific model of cosmic origins (in simplified fashion), agreeing with the widely-known conclusions that:

I- The cosmos could have developed (and presumably did develop) out of a quantum fluctuation from nothing. Schroeder mentions Edward Tryon of Hunter College who was the first cosmogonist/physicist to postulate this concept. The quantum fluctuation resulted in a cosmos where negative and positive energy are balanced (hence there is no need for *a priori* existence of energy to initiate the cosmos).

II- Prior to this event, the only existent items were a Set of Forces called the Laws of Nature. They are not physical; instead they act on matter and energy.

Schroeder then characterizes the situation in the following 4 postulates concerning the Set of Forces:

- 1) Not physical
- 2) Acts on the physical
- 3) Created the physical from nothing
- 4) Predates the universe

Lastly, Schroeder identifies the Set of Forces as the God of Scripture working in Genesis 1:1.
